			DATE MAILED: 04/25/2006	

Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	Applicant(s)					
	10/783,281	KANG, KI BONG					
Office Action Summary	Examiner	Art Unit					
	DANG T TON	2616					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1) Responsive to communication(s) filed on 22 Fe	1) Responsive to communication(s) filed on 22 February 2004.						
<u> </u>	action is non-final.	·					
	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims							
 4) Claim(s) 1-24 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) 1-3,5,6 and 8-24 is/are rejected. 7) Claim(s) 4 and 7 is/are objected to. 8) Claim(s) are subject to restriction and/or election requirement. 							
Application Papers							
 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. 							
Priority under 35 U.S.C. § 119							
 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 							
Attachment(s)							
1) Notice of References Cited (PTO-892)		Interview Summary (PTO-413)					
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) 	Paper No(s)/Mail Da 5) Notice of Informal Pa	te atent Application (PTO-152)					
Paper No(s)/Mail Date 11/18/04; 5/28/04.	6) Other:	FF (1 1 0 102)					

Art Unit: 2616

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3,5,6, and 8-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yun et al. (6,842,836) in view of Ketcham (6,363,429).

For Claims 1-3,5,6, and 8-24, Yun et al. disclose a system/method comprising computing an packet size (see water mark level in figure 4); and adjusting an amount of data to be transmitted per unit of time based on the packet size (see boxes 408 and 410 in figure 4); wherein the amount of data to be transmitted per unit of time is dynamically adjusted (see decreased rate or increased rate in boxes 408 and 410 in figure 4); wherein the amount of data to be transmitted per unit of time is based on a processing speed of an access point (see column 7 lines 1-10); means for computing an packet size (see water mark level in figure 4); and means for adjusting an amount of data to be transmitted per unit of time based on the packet size(see boxes 408 and 410 in figure 4); wherein the amount of data to be transmitted per unit of time is dynamically adjusted (see decreased rate or increased rate in boxes 408 and 410 in figure 4);

Art Unit: 2616

wherein the amount of data to be transmitted per unit of time is based on a processing speed of an access point (see box 406 in figure 4); dynamically adjusting an amount of data to be transmitted per unit of time based on the average packet size, wherein the average packet size is dynamically changed, such that when an incoming packet is greater than the average packet size the amount of data to be transmitted per unit of time increases, and when

transmitted per unit of time decreases(see decreased rate or increased rate in

the incoming packet is less the average packet size the amount of data to be

boxes 408 and 410 in figure 4);

wherein a switch adjusts the amount of data to be transmitted per unit of time.

wherein the amount of data to be transmitted per unit of time is based on a

processing speed of an access point;

wherein the amount of data to be transmitted per unit of time is based on the processing speed of the access point and the packet size(see column 7 lines 1-10);

wherein the processing speed of the access point is predetermined;

means for computing an packet size; and

means for dynamically adjusting an amount of data to be transmitted per unit of time based on the packet size, wherein the packet size is dynamically changed, such that when an incoming packet is greater than the average packet size the amount of data to be transmitted per unit of time increases, and when the incoming packet is less than the packet size the

Art Unit: 2616

amount of data to be transmitted per unit of time decreases(see decreased rate or increased rate in boxes 408 and 410 in figure 4);

wherein a switch adjusts the amount of data to be transmitted per unit of time; wherein the amount of data to be transmitted per unit of time is based on a processing speed of an access point(see box 406 in figure 4); and wherein the processing speed of the access point is predetermined(see box 406 in figure 4); and wherein the data is transmitted to a wireless selected from a group consisting of PDA (see box 100 in figure 50).

For Claims 1-3,5,6, and 8-24, Yun et al. disclose all the subject matter of the claimed invention with the step of determining an average size of packets in a communications network. Ketcham from the same or similar fields of endeavor teaches a provision of the step of determining an average size of packets (see column 5 line 30). Thus, it would have been obvious to the person of ordinary skill in the art at the time of the invention to use the step of determining an average size of packets as taught by Ketcham in the communications network of Yun et al.

The step of determining an average size of packets can be implemented/modified into the network of Yun et al. since it does teach the packet size. The motivation for using the step of determining an average size of packets as taught by Ketcham into the communications network of Yun et al. being that it provides the system more reliable since it detects congestion and prevents the system break down.

Art Unit: 2616

2. Claims 4 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Page 5

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dail et al. (5,570,355) is cited to show a system which is considered pertinent to the claimed invention.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANG T. TON whose telephone number is 571-272-3171. The examiner can normally be reached on MON-WED, 5:30 AM-6:00 PM and Thur 5:30-9:30 A.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matar Ahmad can be reached on 571-272-7488. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/783,281 Page 6
